

## SMART MAGNETIC PLASTER

### APPLICATION GUIDE

Carefully measure the area you wish to cover and ensure you have enough paint.

**To apply Smart Magnetic Plaster correctly, please follow the instructions below. Further information can be found on our website [www.smartersurfaces.com](http://www.smartersurfaces.com).**

### HOW TO APPLY SMART MAGNETIC PLASTER

#### 1 MEASURE

- Measure the area you wish to cover, ensuring you have a total of 2kg of magnetic plaster per 1 sq. metre (10.6 sq. feet)

#### 2 PREPARE

- Inspect your surface, making sure that it is clean, dry and capable of supporting the magnetic plaster. Cover any edges, light switches or fittings with masking tape. Apply a coat of Smart White Primer to seal the surface.
- Ensure the primer is dry before applying Smart Magnetic Plaster

#### 3 MIX

- Once you have opened your container of plaster, mix it well. Do not dilute as it is ready to use.

#### 4 APPLY - COAT 1

- **For professional installers**, apply 1kg per 1 sq. metre (10.6 sq. feet), or 1.2mm per coat, using a steel trowel.
- **For non-professional installers**, weigh out 1kg of plaster on a scales. Apply this over an area of 1 sq. metre (10.6 sq. feet) with a plastering blade. Once applied, spread the plaster evenly across the area with a short pile roller sleeve. Repeat this process on the next 1 sq. metre area (10.6 sq. feet).

#### 5 SMOOTH - COAT 1

- Once your plaster has become partially dry, use a steel trowel to smooth the surface before it becomes fully dry. Afterwards, allow this coat a minimum of six hours drying time before applying the second coat.

#### 6 APPLY - COAT 2

- Apply the second coat of plaster by repeating Step 4.

#### 7 SMOOTH - COAT 2

- Wait approximately one to two hours, or until your plaster has become partially dry. Then, using a steel trowel, smooth the surface before it has dried fully. If necessary, use a little water to dampen the surface when smoothing.

## SMART MAGNETIC PLASTER

### APPLICATION GUIDE

8

#### INSPECT - THE SURFACE

Check if your surface is uneven or has any imperfections after the second coat of primer has dried. If so, apply a thin layer of plaster and lightly skim it over the surface with a smooth edged trowel to ensure an even, smooth finish.

9

#### ALLOW DRYING TIME AND SAND IF REQUIRED

Allow the surface to dry for a minimum of 24 hours. Once dry, lightly sand the surface as required.

**YOUR WALL IS READY TO USE AS A MAGNETIC SURFACE  
OR AS A MAGNETIC BASE FOR THE FINISH OF YOUR CHOICE.**

#### USING YOUR SMART MAGNETIC SURFACE

For best performance, we recommend using our Smart Neo-Magnets or any other high quality neodymium magnets available from your local Smarter Surfaces partner or from [www.smartersurfaces.com](http://www.smartersurfaces.com).

#### PRODUCT LIABILITY CLAUSE

The sale of our products is subject to our General Terms and Conditions available on [www.smartersurfaces.com](http://www.smartersurfaces.com)
